Let's just put some text in here. As it is written, "Once upon a time, there were three 🫘s. Or is it three 🐹s? I can never remember." With the right font, I affirm that we have the flexibility to fit in some ligatures. You'll find some fonts flop there though. Are We Too Picky? I think some math would be nice. How about this classic:

$$\int_{-\infty}^{\infty} e^{-x^2}\, dx = \sqrt{\pi}$$

We can always just put π or even *π* (that's italicized) in there gratuitously as part of the text.

Here are a few lines from the Emacs hello screen. Just for fun, we'll put it in a table and include Hebrew, which is right to left. Also, to make things interesting, I'm going to add some *italics* and **bold** and <u>underline</u> to this paragraph and gratuitously change fonts part way through. Finally, I'm going to change the justification so we have even margins on both sides.

Balinese (ᬨᬅᬦᬓᬲ�ᬨᬗᬨᬶ)	ᬫᬺᬙᬫᬬᬸᬲ
Devanagari (देवनागरी)	नमस्ते / नमस्कार
Greek (ελληνικά)	Γειά σας
Hebrew (עִבְרִית)	שָׁלוֹם
